Hera Seo Art 10C

Project Proposal

Conceptual Framework

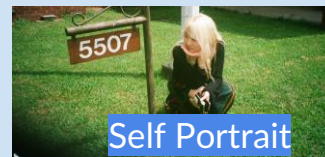

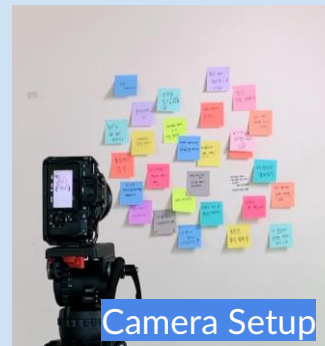

For this project, I used my computer motherboard as a self-portrait. I thought a motherboard was a good way to represent myself because it connects every part of a computer, just like my memories, experiences, family, dreams, and creativity all connect to make me who I am. I took photos of my own motherboard and added my own pictures and personal elements. I changed the meaning of the computer parts to represent different parts of my life. For example, the CPU represents creativity because making art and creating things is what drives my life. Other parts represent my family, memories, experiences, imagination, passion, and humanity.

Instead of showing a motherboard as just a piece of technology, I wanted to turn it into something more personal. This project is about how all of these different experiences come together to shape my identity. My life is always changing, just like a computer is always processing information.

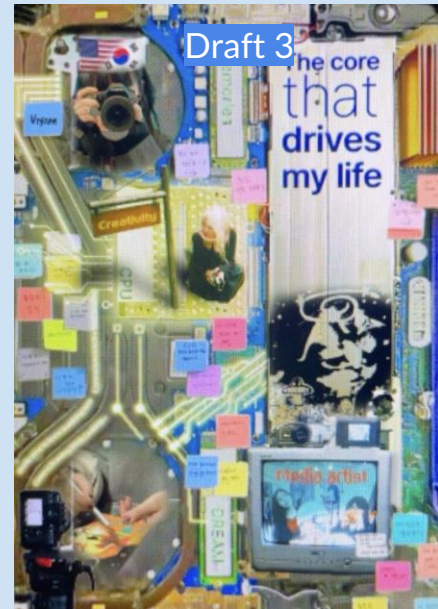

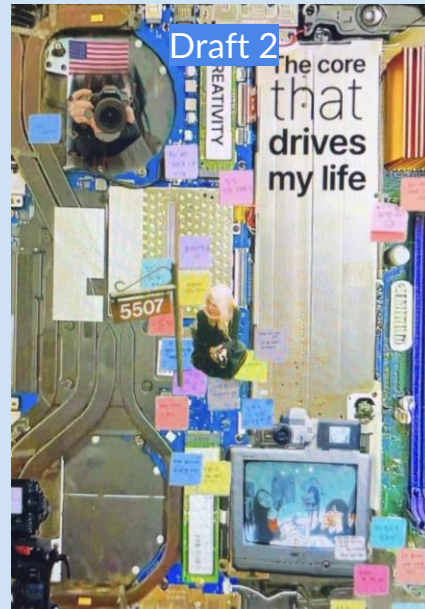

The core that drives my life is not technology - it is creativity.
